#### INTRODUCTION

The survey for this publication was conducted by Statistics Canada with the coperation of the Canadian Electrical Association and various federal government departments. It endeavours to provide a detailed listing of prime movers and generating equipment installed as of December 31, 1980. Survey coverage is limited to those utilities and companies which have at least one plant with a total generating capacity of over 500 kW and is exclusive of auxiliary equipment installed only for generating station service.

Plants operated by each utility or company are listed alphabetically and the generator units are listed in chronological sequence.

Between the two World Wars, three editions of a "Directory of Central Electric Stations" were produced by the Dominion Water Power and Reclamation Service of the Department of the Interior in collaboration with the Dominion Bureau of Statistics. In this directory, both the equipment and the service provided by electric utilities and companies which sold part of their generation were described in considerable detail but no information was provided on industrial plants which produced electric energy solely for own use. Also, no information was obtain from plants located in what is now the province of Newfoundland. The last of these directories was published in 1928, although a supplement was issued in 1936.

In 1937, the Dominion Bureau of Statistics produced a mimeographed list of "Power Plants of Large Central Electric Stations". This list grouped hydro and thermal plants by province and company showing their total horsepower capacity and precise geographic location.

Previous reports titled Inventory of Prime Mover and Electric Generating Equipment were published for 1958, 1961, 1966 and 1969. Beginning with the 1971 edition, this report is published on an annual basis.

## INTRODUCTION

L'enquête qui a servi à cette publication a été effectuée par Statistique Canada avec la collaboration de l'Association canadienne de l'électricité et divers ministères fédéraux. On s'applique à fournir une liste détaillée des moteurs primaires et des générateurs électriques installés au 31 décembre 1980. La couverture de l'enquête se limite aux services d'utilité et aux sociétés ayant au moins une centrale dont la puissance génératrice totale dépasse 500 kW et ne comprend pas le matériel auxiliaire installé exclusivement au profit des centrales génératrices.

Les centrales exploitées par les divers services d'utilité et les diverses sociétés figurent dans l'ordre alphabétique, et les générateurs figurent dans l'ordre chronologiques.

Entre les deux guerres mondiales, trois éditions d'un "Répertoire des centrales électriques" ont été publiées par le service fédéral responsable de l'énergie hydro-électrique au ministère de l'Intérieur, en collaboration avec le Bureau fédéral de la statistique. Ce répertoire décrivait d'une manière très détaillée le matériel des services d'utilité et des compagnies qui vendaient une partie de l'énergie qu'elles produisaient, de même que les services assurés par ces entreprises. Cependant il ne comportait aucun renseignement au sujet des centrales industrielles qui produisaient de l'électricité pour leur usage exclusif. Aucun renseignement ne parvenait de ce qui est devenu la province de Terre-Neuve. Le dernier de ces répertoires a paru en 1928, bien qu'un supplément a été publié en 1936.

En 1937, le Bureau fédéral de la statistique a établi une liste polycopiée qui énumérait les "usines productrices des grandes centrales électriques". Cette liste groupait les centrales hydro-électriques et thermiques par province et par société, et indiquait leur capacité totale de production en cheval vapeur ainsi que leur emplacement exact.

Auparavant, sous le titre Inventory of Prime Mover and Electric Generating Equipment des publications hors série ont paru en 1958, 1961, 1966 et 1969. Commençant avec l'édition de 1971, ce rapport est publié à chaque année.

#### REVIEW OF SURVEY RESULTS

Total installed generating capacity in Canada as of December 31, 1980 was 81 999 210 kW, an increase of 6.1% over the 77 227 170 kW recorded a year earlier. Increases by type were: hydro 3 761 517 kW (8.5%); steam 813 600 kW (2.6%); and gas turbine, 208 282 kW (9.3%). Internal combustion capacity decreased by 11 359 kW (-1.7%).

Hydro-Quebec was responsible for 61.6% of the total increase in hydro capacity in Canada. LG2, part of the giant James Bay project, was increased by an additional seven 333 000 kW units. New Brunswick Electric Power Commission added another 110 000 kW unit at Mactaquac. British Columbia Hydro installed a 202 500 kW unit at Seven Mile, a 300 000 kW unit at Gordon M. Shrum and four 175 000 kW units at Peace Canyon.

Steam generating additions included units of  $158\ 000\ kW$  at Lingan,  $294\ 000\ kW$  at Poplar River and  $400\ 000$  at Sundance.

# REVUE DES RÉSULTATS DE L'ENQUÊTE

En date du 31 décembre 1980, la puissance génératrice installée au Canada totalisait 81 999 210 kW, soit 6.1% de plus que les 77 227 170 kW enregistrés un an auparavant. Voici les augmentations par type: hydraulique, 3 761 517 kW (8.5%); vapeur, 813 600 kW (2.6%); et turbine à gaz, 208 282 kW (9.3%). Pour le type combustion interne, on note une diminution de la puissance génératrice installée de l'ordre de 11 359 kW (-1.7%).

Hydro-Québec fut responsable de 61.6% du total de l'augmentation dans l'hydraulique. La centrale LG2 du projet hydro-électrique de la Baie James a accru sa capacité de production par la mise en service de sept unités additionnelles de 333 000 kW. La Commission d'énergie électrique du Nouveau-Brunswick a augmenté de 110 000 kW la puissance installée de la centrale de Mactaquac. La société British Columbia Hydro à mise en place une nouvelle unité de 202 500 kW à Seven Mile, une autre de 300 000 kW à Gordon M. Shrum et quatre de 175 000 kW à Peace Canyon.

Dans le cas de l'électricité thermique à vapeur, il y a eu notamment l'addition d'une unité de 158 000 kW à Lingan de 294 000 kW à Poplar River et de 400 000 kW à Sundance.

#### HEADING EXPLANATIONS AND NOTES

# All Equipment

Plant name. Where the plant has no official name, a name (usually the same as its location) has been assigned.

Latitude and longitude. In degrees and minutes.

Year. Year of installation.

Manufacturer. See codes.

#### Hydro

Water supply. Name of lake, creek, river or reservoir.

Operating head. Given in feet, the average annual maximum, minimum and normal.

Average annual flow. Expressed in cubic feet per second.

Runner. See codes.

RPM. Revolutions per minute.

Head. Design head given in feet.

Turbine capacity. Given in horsepower.

# Steam

**Steam.** Steam conditions expressed in pounds per square inch gravitational and degrees Fahrenheit: steam production expressed in thousands of pounds per hour.

Type. See codes.

**Throttle.** Throttle conditions in pounds per square inch gravitational and degrees Fahrenheit.

RPM. Revolutions per minute.

Capacity. Maximum continuous kilowatt rating.

# Internal Combustion

Type. See codes.

RPM. Revolutions per minute.

# Gas Turbine

Cycle. See codes.

Shafts. Number of shafts.

Capacity. Kilowatt capacity at ambient temperatures of  $0^{\circ}$  and  $80^{\circ}$  Fahrenheit.

#### EXPLICATION DES TITRES ET DES NOTES

#### Tout genre

Nom de la centrale. Lorsque la centrale n'a pas de nom officiel, on lui a affecté un nom (le plus souvent, celui de l'emplacement).

Latitude et longitude. En degrés et minutes.

Année. Année d'installation.

Fabricants. Voir codes.

## Hydro

Source hydraulique. Nom du ruissean, du fleuve, de la rivière ou du réservoir.

Hauteur de chute. En pieds, moyenne annuelle maximum, minimum et normale.

Débit annuel moyen. En pieds cubes par seconde.

Turbine. Voir codes.

T/MN. Nombre de tours à la minute.

Chute. Hauteur théorique de chute, en pieds.

Capacité de turbine. Donnée en cheval vapeur.

# Vapeur

Vapeur. Pression dynamique de la vapeur en livres par pouce carré et température en degrés Fahrenheit: production de vapeur en millier de livres par heure.

Type. Voir codes.

**Soupage.** Pression dynamique à la soupage en livres par pouce carré et température en degrés Fahrenheit.

T/MN. Nombre de tours à la minute.

Capacité. Puissance nominale maximum continue en kilowatts.

## Combustion interne

Type. Voir codes.

T/MN. Nombre de tours à la minute.

# Turbine à gaz

Cycle. Voir codes.

Arbres. Nombre d'arbres.

Capacité. Puissances en kilowatt et aux températures ambiantes de 0° et de 80° Fahrenheit.

#### Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Energy and Minerals Section, Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A OT6 (Telephone: 996-3139) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Winnipeg  | (949-4020) |
|------------|------------|-----------|------------|
| Halifax    | (426-5331) | Regina    | (359-5405) |
| Montréal   | (283-5725) | Edmonton  | (420-3027) |
| Ottawa     | (992-4734) | Vancouver | (666-3691) |
| Toronto    | (966-6586) |           |            |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

#### How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A OV7.

#### Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section de l'énergie et des minéraux, Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A OT6 (téléphone: 996-3139) ou au centre de consultation de Statistique Canada à:

| St. John's | (772-4073) | Winnipeg  | (949-4020) |
|------------|------------|-----------|------------|

#### INTRODUCTION

The survey for this publication was conducted by Statistics Canada with the cooperation of the Canadian Electrical Association and various federal government departments. It endeavours to provide a detailed listing of prime movers and generating equipment installed as of December 31, 1981. Survey coverage is limited to those utilities and companies which have at least one plant with a total generating capacity of over 500 kW and is exclusive of auxiliary equipment installed only for generating station service.

Plants operated by each utility or company are listed alphabetically and the generator units are listed in chronological sequence.

Between the two World Wars, three editions of a "Directory of Central Electric Stations" were produced by the Dominion Water Power and Reclamation Service of the Department of the Interior in collaboration with the Dominion Bureau of Statistics. In this directory, both the equipment and the service provided by electric utilities and companies which sold part of their generation were described in considerable detail but no information was provided on industrial plants which produced electric energy solely for own use. Also, no information was obtain from plants located in what is now the province of Newfoundland. The last of these directories was published in 1928, although a supplement was issued in 1936.

In 1937, the Dominion Bureau of Statistics produced a mimeographed list of "Power Plants of Large Central Electric Stations". This list grouped hydro and thermal plants by province and company showing their total horsepower capacity and precise geographic location.

Previous reports titled Inventory of Prime Mover and Electric Generating Equipment were published for 1958, 1961, 1966 and 1969. Beginning with the 1971 edition, this report is published on an annual basis.

#### INTRODUCTION

L'enquête qui a servi à cette publication a été effectuée par Statistique Canada avec la collaboration de l'Association canadienne de l'électricité et divers ministères fédéraux. On s'applique à fournir une liste détaillée des moteurs primaires et des générateurs électriques installés au 31 décembre 1981. La couverture de l'enquête se limite aux services d'utilité et aux sociétés ayant au moins une centrale dont la puissance génératrice totale dépasse 500 kW et ne comprend pas le matériel auxiliaire installé exclusivement au profit des centrales génératrices.

Les centrales exploitées par les divers services d'utilité et les diverses sociétés figurent dans l'ordre alphabétique, et les générateurs figurent dans l'ordre chronologiques.

Entre les deux guerres mondiales, trois éditions d'un "Répertoire des centrales électriques" ont été publiées par le service fédéral responsable de l'énergie hydro-électrique au ministère de l'Intérieur, en collaboration avec le Bureau fédéral de la statistique. Ce répertoire décrivait d'une manière très détaillée le matériel des services d'utilité et des compagnies qui vendaient une partie de l'énergie qu'elles produisaient, de même que les services assurés par ces entreprises. Cependant il ne comportait aucun renseignement au sujet des centrales industrielles qui produisaient de l'électricité pour leur usage exclusif. Aucun renseignement ne parvenait de ce qui est devenu la province de Terre-Neuve. Le dernier de ces répertoires a paru en 1928, bien qu'un supplément a été publié en 1936.

En 1937, le Bureau fédéral de la statistique a établi une liste polycopiée qui énumérait les "usines productrices des grandes centrales électriques". Cette liste groupait les centrales hydro-électriques et thermiques par province et par société, et indiquait leur capacité totale de production en cheval vapeur ainsi que leur emplacement exact.

Auparavant, sous le titre Inventory of Prime Mover and Electric Generating Equipment des publications hors série ont paru en 1958, 1961, 1966 et 1969. Commençant avec l'édition de 1971, ce rapport est publié à chaque année.

#### REVIEW OF SURVEY RESULTS

### REVUE DES RÉSULTATS DE L'ENQUÊTE

Total installed generating capacity in Canada as of December 31, 1981 was 83 746 054 kW, an increase of 2.1% over the 81 999 210 kW recorded a year earlier.

En date du 31 décembre 1981, la puissance génératrice installée au Canada totalisait 83 746 054 kW, soit 2.1% de plus que les 81 999 210 kW enregistrés un an auparavant.

Changes involving generating capacity were as follows

Les changements concernant la capacité des générateurs était comme suit

#### HEADING EXPLANATIONS AND NOTES

#### All Equipment

Plant name. Where the plant has no official name, a name (usually the same as its location) has been assigned.

Latitude and longitude. In degrees and minutes.

Year. Year of installation.

Manufacturer. See codes.

#### Hydro

Water supply. Name of lake, creek, river or reservoir.

Operating head. Given in feet, the average annual maximum, minimum and normal.

**Average annual flow.** Expressed in cubic feet per second.

Runner. See codes.

RPM. Revolutions per minute.

Head. Design head given in feet.

Turbine capacity. Given in horsepower.

#### Steam

**Steam.** Steam conditions expressed in pounds per square inch gravitational and degrees Fahrenheit: steam production expressed in thousands of pounds per hour.

Type. See codes.

Throttle. Throttle conditions in pounds per square inch gravitational and degrees Fahrenheit.

RPM. Revolutions per minute.

Capacity. Maximum continuous kilowatt rating.

### Internal Combustion

Type. See codes.

RPM. Revolutions per minute.

#### Gas Turbine

Cycle. See codes.

Shafts. Number of shafts.

Capacity. Kilowatt capacity at ambient temperatures of 0° and 80° Fahrenheit.

#### **EXPLICATION DES TITRES ET DES NOTES**

#### Tout genre

Nom de la centrale. Lorsque la centrale n'a pas de nom officiel, on lui a affecté un nom (le plus souvent, celui de l'emplacement).

Latitude et longitude. En degrés et minutes.

Année. Année d'installation.

Fabricants. Voir codes.

#### Hydro

Source hydraulique. Nom du ruisseau, du fleuve, de la rivière ou du réservoir.

Hauteur de chute. En pieds, moyenne annuelle maximum, minimum et normale.

Débit annuel moyen. En pieds cubes par seconde.

Turbine. Voir codes.

T/MN. Nombre de tours à la minute.

Chute. Hauteur théorique de chute, en pieds.

Capacité de turbine. Donnée en cheval vapeur.

#### Vapeur

Vapeur. Pression dynamique de la vapeur en livres par pouce carré et température en degrés Fahrenheit: production de vapeur en millier de livres par heure.

Type. Voir codes.

**Soupage.** Pression dynamique à la soupage en livres par pouce carré et température en degrés Fahrenheit.

T/MN. Nombre de tours à la minute.

Capacité. Puissance nominale maximum continue en kilowatts.

#### Combustion interne

Type. Voir codes.

T/MN. Nombre de tours à la minute.

#### Turbine à gaz

Cycle. Voir codes.

Arbres. Nombre d'arbres.

Capacité. Puissances en kilowatt et aux températures ambiantes de 0° et de 80° Fahrenheit.

#### SELECTED PUBLICATIONS

Reports published by the Manufacturing and Primary Industries Division dealing with Electric Power.

# Catalogue

### Annual

- 57-202 Electric Power Statistics, Volume II Annual Statistics, Bil.
- 57-203 Electricity Bills for Domestic, Commercial and Small Power Service, Bil.
- 57-204 Electric Power Statistics, Volume I -Annual Electric Power Survey of Capability and Load, Bil.
- 57-206 Electric Power Statistics, Volume III - Inventory of Prime Mover and Electric Generating Equipment as of December 31, Bil.

## Monthly

57-001 Electric Power Statistics, Bil.

Bil. - Bilingual

In addition to the selected publications listed above, Statistics Canada publishes a wide range of statistical reports on Canadian economic and social affairs. A comprehensive catalogue of all current publications is available free on request from Statistics Canada, Ottawa (Canada), K1A OT6.

#### **PUBLICATIONS CONNEXES**

Publications de la Division des industries manufacturières et primaires traitant de l'énerque électrique.

### Catalogue

#### Annuelle

- 57-202 Statistique de l'énergie électrique, volume II - Statistique annuelles, Bil.
- 57-203 Factures d'électricité des services domestique, commercial et à la petite industrie, Bil.
- 57-204 Statistique de l'énergie électrique, volume I - Enquête annuelle sur la puissance maximale et sur la charge des réseaux, Bil.
- 57-206 Statistique de l'énergie électrique, volume III - Inventaire des moteurs primaires et des générateurs électriques au 31 décembre, Bil.

#### Mensuelle

57-001 Statistique de l'énergie électrique, Bil.

Bil. - Bilingue

Outre les publications ci-dessus énumérées, Statistique Canada publie une grande variété de rapports statistiques sur le Canada tant dans le domaine économique que social. On peut se procurer gratuitement un catalogue complet des publications courantes à Statistique Canada, Ottawa (Canada), K1A OT6.
